Vyakaranam

(Science of Grammar)

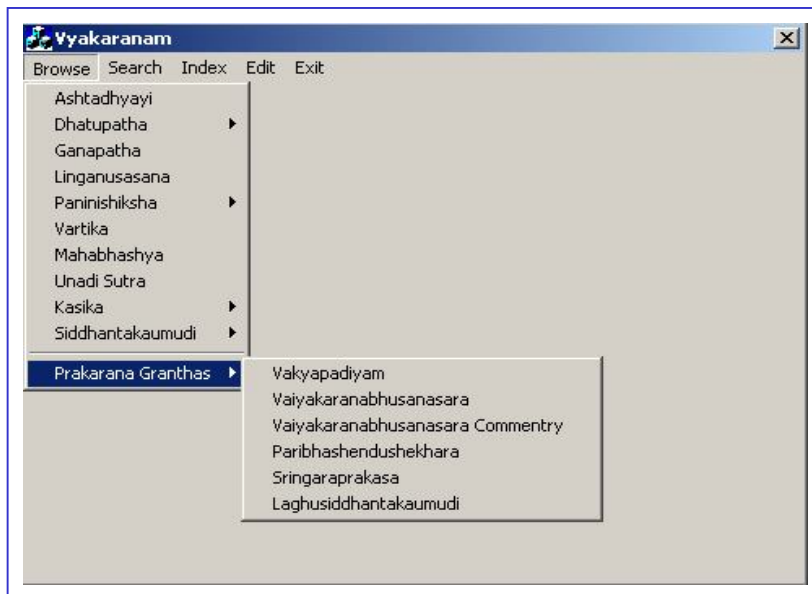

Aṅgīdhyaṅg of sage Pīṅini, a Vedīṅga (likened to the `mukha` (mouth) of Veda Puruṅā), contains well-structured grammar rules for sanskrit language consisting of about 4000 sutras in 8 chapters and 32 quarters (in all, having only about 60,000 characters!);

Pīṅini's Aṅgīdhyaṅg deals with word-level aspects like rules for formation of valid word-forms, description of their structure and rules for their usage. This covers simple, compound and concatenated word-formation of various types, parts of speech like nouns, verbs, attributives, relational functors, governance clauses etc. in scriptural and literary language, parameters like origin of sound, internal and external effort, phonetic classification, accents etc. at substrate and affix levels for all words. The substrate could be nominal stem or base for nouns and verbal roots for verbs. Affixes include prefixes (like upasarga for verbs), in-fixes (certain taddhitas for nouns, conjugational ones in certain classes of verbs etc.) and suffixes (like Sup for nouns, 'Ti` etc. for verbs and so on). The process of derivation of valid word-forms becomes thus clearly defined.
